

Channel balers

Type HPK – long version

 Container Pressen | Schneckenverdichter | Ballenpressen | Umlade- und Verschiebeanlagen | Hub-Kippvorrichtungen
Compactors | Auger Compactors | Balers | Transfer and Shifting Stations | Bin Lifters

Channel balers

Type HPK – long version

Versatile and effective

Due to their compact design the PRESTO channel balers, type HPK, require little space. They are used to compact large quantities of recycling materials to make stable bales. Stable, stackable bales help you to use your storage space and transportation capacity efficiently and to reduce costs.

The system can be fed continuously, either manually or by machine conveyors.

Easy and safe

Reliable function and user-friendliness go without saying for all PRESTO products. Not only in operation, but also in terms of integration into the working environment.

A PRESTO channel baler is ready for use as soon as the machine is installed on its foundation and power is supplied.

Carefree disposal

The reuse of recycling material or disposal of waste is an important task in the business activities of many companies.

Our long-standing experience in environmental technology and our most modern development and production methods allow us to manufacture products which our customers use as a functional and cost-efficient link in the chain of recycling material compaction and disposal.

Tailored for customer needs

Wherever large quantities of packaging waste and industrial products are generated and need to be disposed PRESTO channel balers can be used.

A broad range of accessories is available to meet all customer-specific requirements.

We develop your individual optimum solution for your disposal problem.

Features and benefits

- The automatic channel adjustment keeps the compaction density of the material constant.
- The push-needle and the automatic binding system make for a compact design and minimum wire consumption.
- The plunger runs in polyamide guides on all sides and works silently, the sliding guides are low-wear adjustable elements.
- The system with blade and counter-blade ensures continuously high bale quality.
- The PLC system with a touch panel allows you to set important parameters and makes the unit user-friendly.

Guaranteed powerful performance

The preselection of several compaction pressures on a PRESTO channel baler, type HPK, allows you to make easy and quick adjustments to a diversity of materials.

The trouble-free motion detectors work contact-free and thus increase machine availability.

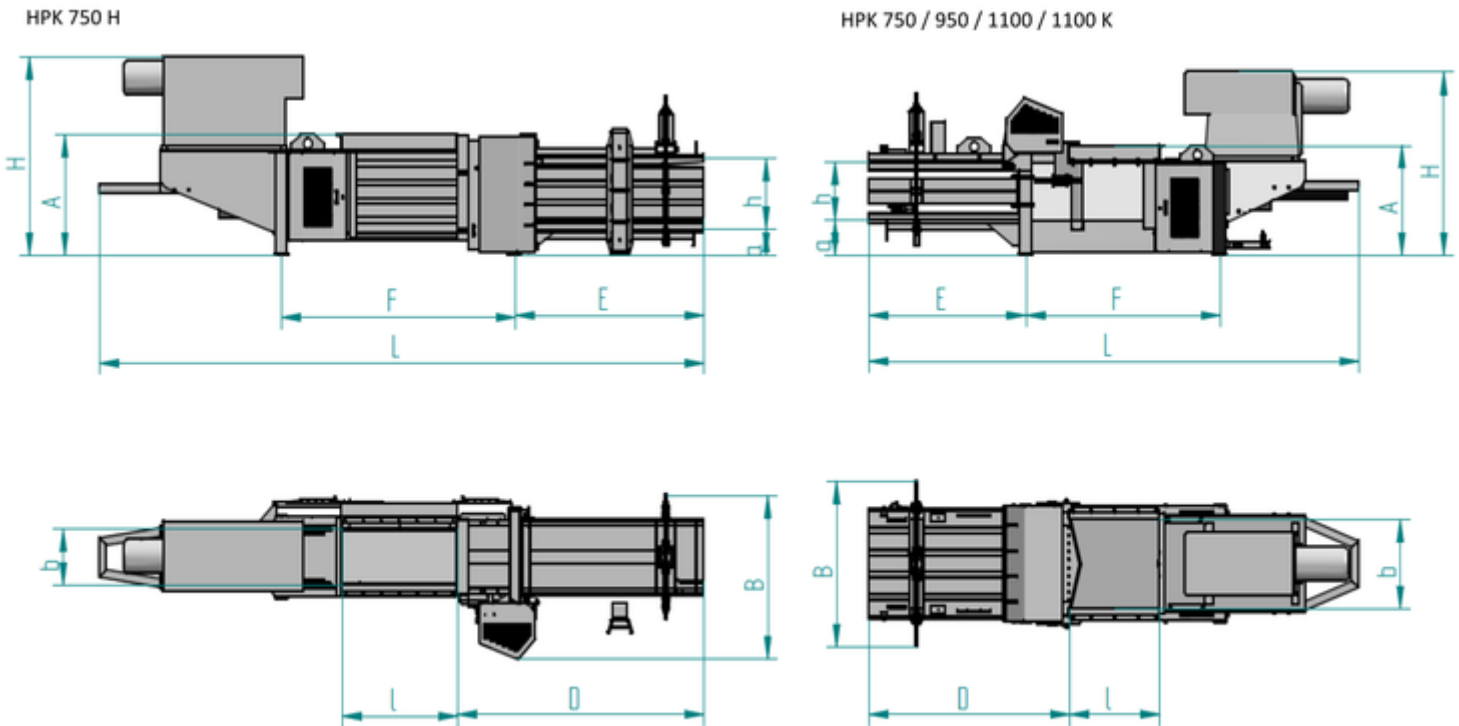

The channel bottom is lined with exchangeable wear panels to ensure a long service life.

High-quality components ensure reliable function and low-noise operation at < 80 dB (A).

The hydraulic central drive with a demand-controlled axial piston pump helps save energy.

Of course our paints contain neither lead nor chromium, and you can select the colour of your choice.
