Compactors | Auger Compactors | Balers | Transfer and Shifting Stations | Bin Lifters

# Bin lifter

## Type HKV

### Versatile and effective

PRESTO bin lifters can be used wherever waste and recycling materials are collected in distributed collection bins.

PRESTO bin lifters are available as mobile, stationary and integrated versions.

The collection bins with the material are taken to a central place for disposal. Here the material is easily tipped into open containers, hoppers or compaction systems.

### Easy and safe

Reliable function and user-friendliness go without saying for all PRESTO products. Not only in operation, but also in terms of integration into the working environment.

The use of a PRESTO bin lifter does not require any construction work. An electrical power supply is all that is necessary for putting it into service.

### Carefree disposal

The reuse of recycling material or disposal of waste is an important task in the business activities of many companies.

Our long-standing experience in environmental technology and our most modern development and production methods allow us to manufacture products which our customers use as a functional and cost-efficient link in the chain of recycling material compaction and disposal.

### Tailored for customer needs

Wherever waste or recycling materials are generated in several separate areas and where the material volume required the use of large bins or special company containers our PRESTO bin lifter can be used.

They are designed for standardized large bins (MGB 120 up to U 2.5) or for customer-specific special containers. We design the bin lifters for individual applications and offer a broad range of accessories so as to meet all customer-specific requirements.

We develop your individual optimum solution for your disposal problem.

## Features and benefits

- 
 PRESTO bin lifters can be used with almost all DIN collection bins and with special containers.
- 
 The strong castors of the mobile version ensure easy steering and swift travel of the bin lifter.
- 
 Besides the pin-type pick-up another option is the comb-type pick-up system for 120 l and / or 240 l bins.
- 
 Besides two-hand control the acoustic and / or optional optical signal ensures the high level of safety at work.
- 
 As an option protection grids on the sides are also available (but not mandatory acc. to the DIN standard).
- 
 Pipe break safeguards, end-position cushioning for the hydraulic cylinders, and hydraulic hoses with jet protection are standard equipment.

## Guaranteed powerful performance

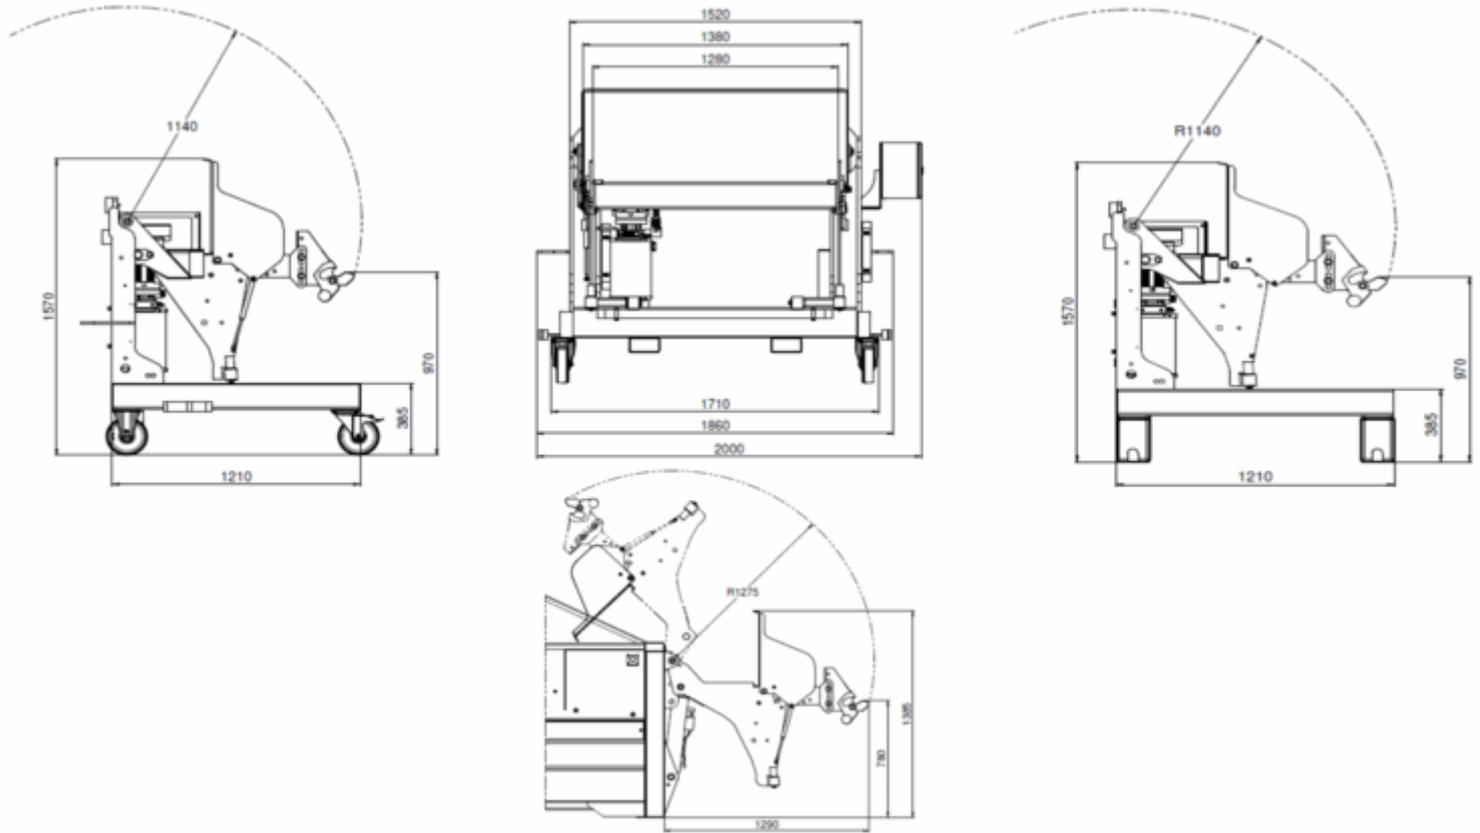

The robust, torsion-free swing construction ensures durability and reliable function.

The low-wear bearings in the pivot points are designed for very large loads.

High-quality components ensure reliable function, low maintenance and quiet operation < 70 dB (A).

Of course our paints are lead and chromium free, and you can select the colour of your choice.
